

Congratulations on your purchase of a new SleepPros Memory Foam sleep system!

Your new SleepPros Memory Foam sleep system will provide you with years of reliable use and comfortable slumber. If for any reason you have a warranty issue with your new SleepPros Memory Foam sleep system, please refer to the separate warranty information provided by your dealer. Below are instructions for setting up your new Memory Foam sleep system.

Shipping Contents

- One 2" or 3" support foam 35 ILD. (size is relative to model ordered)
 - One 2" or 3" support foam 30 ILD. (size is relative to model ordered)
- Memory Foam is specific to the model your ordered. (**) Please refer to your dealer in determining the profile of your model and foam included.
- One 2" or 3" Memory Foam comfort layer (**White or cream in color)
 - One 2" or 3" 5 LB Memory Foam comfort layer. (**Pale pink or white in color)
 - One zippered Terry-Velour Cotton Cover or Specialty Cover (**Specific to model ordered)

Step-by-step Assembly

- 1) Determine where you want to place your bed. Remove the zippered cover from the box and place it on your foundation.
- 2) Unzip the cover. With the mattress cover unzipped and neatly in place on the foundation, place one of the the two support layers in the bottom of the cover. Manipulate the layer until it is square and centered in the bottom of the cover.
- 3) Place the second support layer on top of the first. Manipulate the layer so that the edges and corners line up with the bottom layer. A small flick of the wrist (like flicking a sheet) helps with manipulating support base foam layers.
Memory Foam is specific to the model your ordered. (**) Please refer to your dealer in determining the profile of your model and foam included.
- 4) Place the **3 LB Memory Foam comfort layer on top of the base layers. Manipulate the Memory Foam comfort layer so that the edges and corners line up with the support layers.
- 5) Place the **5 LB Memory Foam comfort layer on top of the **3 LB Memory Foam comfort layer. Manipulate the Memory Foam comfort layers so that the edges and corners line up with the **3 LB Memory Foam and support layers.
- 6) Zip the cover closed.

That's all there is to it! Easy as pie (or more exactly, easy as a layer cake!) Once assembled, you'll find that because of the friction between layers, the bed will stay square and true. To move the mattress, simply unzip the cover, disassemble, and reassemble in its new location. The firmness level of the mattress can be changed at any time by exchanging the top two comfort layers (model specific) with firmer or softer pieces of Memory Foam and/ or doing the same with the support base layers.
